### DETAILED ACTION

1. The following is an examiner's statement of reasons for allowance:

The invention relates to a distillation system with individual fractionator tray temperature control, which comprises:

- (a) at least one distillation column having a plurality of fractionation trays, and having feed input means, liquid removal means, and vapor removal means, wherein at least a majority of the plurality of trays include a heating element and a cooling element;
- (b) control means for separate control for the tray heating element and tray cooling element; wherein the cooling element is at least one open area within the tray the cooling element having an inlet port for injection of a coolant into the at least one open area within the tray and at least open area being a heat absorbent area, and the cooling element having an outlet port for removal of the coolant from the at least one open area.

The invention as claimed provides for specific management and computerized temperature control for each tray in the fractionator which will permit shifting of the reaction to increase or decrease heavy bottoms or top lights, stoichiometry and yield for each tray by providing a heater and a cooling element which provides uniform heating and cooling distributed over the open area of the trays which has not been taught either singularly or in combination by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
